

## REMARKS

Reconsideration and allowance of the subject application are respectfully solicited.

Claims 48 and 50 through 56 are pending, with Claims 48, 50, 53, and 55 being independent. All claims have been amended.

Claims 48 and 50 through 56 were rejected under 35 U.S.C. § 103 over US 2002/0065910 A1 (Dutta) in view of US 2001/0035917 A1 (Satake, et al.). All rejections are respectfully traversed.

Claim 48 recites, *inter alia*, controlling, while the power source is in an off state, to periodically repeat accessing of a URL of the moving image-streaming content (which is internet broadcasting content) which had been displayed before the turning off the power source, so as to receive... and to buffer in the buffering unit the latest moving image-streaming content, and controlling, responsive to the receiving of the operation of turning on the power source, to read out from the buffering unit the latest buffered moving image-streaming content and to start displaying, while Claim 53 recites, *inter alia*, after receiving of the operation of turning off the power source and before receiving of the operation of turning on the power source, reading out the URL information and periodically repeating accessing of a URL of the moving image-streaming content (which is internet broadcasting content) which had been displayed before turning off the power source, so as to receive and buffer the latest moving image-streaming content, and responsive to the receiving of the operation of turning on the power source, reading out the latest buffered moving image-streaming content and starting the displaying.

Claim 50 recites, *inter alia*, controlling, while the television broadcast program is displayed on the display screen, to periodically repeat accessing of a URL of the moving

image-streaming content (which is internet broadcasting content) which had been displayed before starting the displaying of the television broadcast program on the display screen, so as to receive... and to buffer in the buffering unit the latest moving image-streaming content, and controlling, responsive to the receiving of the operation of switching from the displaying of the television broadcast program to the displaying of the moving image-streaming content, to read out from the buffering unit the latest buffered moving image-streaming content and to start the displaying, while Claim 55 recites, *inter alia*, while the television broadcast program is displayed on the display screen, periodically repeating accessing of a URL of the moving image-streaming content (which is internet broadcasting content) which had been displayed before starting the displaying of the television broadcast program, so as to receive and buffer the latest moving image-streaming content, and responsive to the receiving of the operation of switching from the displaying of the television broadcast program to the displaying of the moving image-streaming content, reading out the latest buffered moving image-streaming content and starting the displaying.

However, Applicants respectfully submit that none of the applied documents, even in the proposed combinations, assuming, *arguendo*, that such could be combined, discloses or suggests at least the above-discussed claimed features as recited, *inter alia*, in Claims 48, 50, 53, and 55.

Applicants further respectfully submit that there has been no showing of any indication of motivation in the cited documents that would lead one having ordinary skill in the art to arrive at such features.

The dependent claims are also submitted to be patentable because they set forth additional aspects of the present invention and are dependent from independent claims discussed above. For example, Claims 51 and 56 recite, *inter alia*, responsive to... turning on the power source, changing the content displayed from the content displayed from the latest moving image-streaming content... which had been buffered while the power source had been in an off state, to the moving image-streaming content being received, while Claims 52 and 54 recite, *inter alia*, responsive to... switching from the displaying of the television broadcast program to the displaying of the moving image-streaming content, changing the content from the latest moving image-streaming content, which had been buffered while the television broadcast program had been displayed, to the moving image-streaming content being received. However, Applicants respectfully submit that none of the cited documents, even in the proposed combinations, assuming, *arguendo*, that such could be combined, discloses or suggests at least the above-discussed claimed features as recited, *inter alia*, in Claims 51, 52, 54, and 56. Therefore, separate and individual consideration of each dependent claim is respectfully requested.

#### REQUEST FOR INTERVIEW

Applicants respectfully request that the Examiner contact Applicants' undersigned representative, Daniel S. Glueck, at (202) 530-1010 to schedule a personal interview.

### CONCLUSION

Applicants submit that this application is in condition for allowance, and a Notice of Allowance is respectfully requested.

Applicants' undersigned attorney may be reached by telephone in our Washington, D.C. office at (202) 530-1010. All correspondence should be directed to our address given below.

Respectfully submitted,

/Daniel S. Glueck/
